

Hints for “Let’s Talk About... SAX”

Each answer word contains the letters S A X in order (although not necessarily consecutively).

The clue letter “equations” are not mathematical formulas. They do, however, indicate which word to use and which letter from it.

The number at the beginning of each clue letter “equation” indicates which word to use. Consider what “ $X + n$ ” or “ $X - n$ ” might mean.

The numbers are offsets from the “X” in each word, with plus indicating moving to the right and minus moving to the left.
