

Eleven rats are tied together in a rat king, and each one is thinking about how it got stuck. Index their thoughts to learn how a twelfth rat got attached.

September 2016 Sum the number on the bubble and the value on the corresponding rat. Index into each rat's thought. Beginning with the "stuck first" rat, the message is "CUT THEN TURN". Cut out the circle, rotate counterclockwise by three rats. There are now twelve rats, and using the same indexing technique you find the solution "WE TIED ONE ON".
