

# The Venue in Verona ★★★★☆

The Capulets and Montagues have each claimed half of each city block as their territory. They have divided each with a wall, corner to corner. This makes getting to the wedding venue like traversing a maze. Help our couple find a path that crosses the city, from one side to the other, to find out who awaits them there.

- In **every square**, draw a diagonal line between two of its opposing corners, in one of the two possible directions, as shown in the upper-left.
- Each numbered circle shows exactly how many lines connect to that point.
- Unnumbered points can have any number of lines meeting at them.
- No area can be completely walled off. The entire grid must be reachable from at least one of the sides (i.e. do not create any complete squares or rectangles with your lines).
- Paths will form between the lines you draw, making a maze.
