

# 4. Party Time

WOO HOO! Everyone cheers as a dozen party streamers shoot up into the air. The streamers land around the perimeter of the room – none on the central dance area. And their pattern on the floor is quite puzzling:

- 1) The streamers have only right-angle bends in them.
- 2) No streamer crosses itself or another streamer.
- 3) Every square tile has one and only one streamer covering it.
- 4) Every streamer covers fifteen tiles and has a letter at one end, a letter at the other end and a number in the exact middle. The number indicates how many bends occur in the streamer.

The B-5-A streamer has been filled in for you as an example.
