

They say that **all roads lead to Rome**. And for suburban Romans, **some roads led through Rome, too**. That might be helpful for them if they knew where the roads were! It seems that you'll have to redraw them, boggle-style. (This means **the roads can turn horizontally, vertically, or diagonally, but don't double back on themselves.**)

Where did suburban Romans meet when carpooling into central Rome together – and what was the only thing that could stop them from entering the city?
